DETAILED ACTION

Response to Amendment

1. After careful reconsideration of the finality of the rejection of the last Office action, the finality of that action is withdrawn due to the withdrawal of previously indicated allowable subject matter (with respect to claims 15-36 and 38-46), see below. Examiner maintains rejection under 35 USC 102 with regards to claims 15,23-24 and 37.

Allowable Subject Matter

2. The indicated allowability of claims 25-36 and 38-46 is withdrawn in view of a claim rejection based 35 USC 112, first paragraph, see below.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claims 15-36 and 38-46 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The specification does not mention wherein said unique message pointer is associable with two or more subscribers or further linking said message stored

Art Unit: 2686

on said server with a second specific network address associated with said specific message and further associated with a second given subscriber.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

6. Claim 15,23-24 and 37 are rejected under 35 U.S.C. 102(e) as being anticipated by Brilla et al. No. 6,389,276, newly discovered.

Regarding claim 15, Brilla discloses a method of providing access to a specific message stored on a message server, comprising:

generating a unique message pointer (i.e., TAP paging message, including an access number and the text of the message to be displayed) associated with said specific message stored on said server (e.g., voice mail platform) (col. 16, lines 16-21) ; and

sending said message pointer (i.e., via the MWI controller) to at least one given subscriber's address (i.e., E-mail address and the portable number (if needed)) (col. 16, lines 28-49) ;

Art Unit: 2686

wherein said at least one given subscriber may use said message pointer in combination with a subscriber's address identifier associated with said at least one given subscriber to enable access to said message without having to input any additional data (i.e., "instantly access the stored voicemail message") (col. 16, lines 54-67).

Regarding claim 23, Brilla further discloses a method according to claim 15, wherein said unique message pointer (i.e., TAP page message) is further associated with a specific subscriber from said at least one given subscribers (col. 16, lines 16-21).

Regarding claim 24, Brilla further discloses a method according to claim 23, wherein said generating further comprises, inherently for each (i.e., selected mobile unit) of said at least one given subscribers, generating a unique message pointer (col. 16, lines 16-21 and lines 59-62).

Regarding claim 37, Brilla disclose a method of providing access to a specific message stored on a server, comprising:

linking (i.e., via translation table) a message stored on said server with a first specific network address associated with said specific message and further associated with a given subscriber (col. 16, lines 15-21 and lines 28-35);

sending said specific network address (i.e., E-mail address and portable number) to said given subscriber's address (col. 16, lines 36-48); and

using said first specific network address to initiate a communication session with said communication device at said first specific network address (col. 16, lines 249-59);

Art Unit: 2686

wherein upon the identification of said given subscriber's address, access to said stored message is provided without having to input any additional data (col. 16, lines 59-67).
